through State
Funded Education
Grant**

Background

At Stark Charge, we pride ourselves on being a trusted provider of energy data, metering, analytics, and infrastructure solutions.

When the Co-op Academies Trust in Manchester reached out for EV chargers, we saw an opportunity to deliver a top-tier service.

Our partnership with Newgen allowed us to showcase our expertise, ensuring a smooth and efficient experience and emphasising the importance of energy data in understanding consumption patterns.

The Brief

Co-op Academies Trust required new EV chargers for their site, and through our collaboration with Newgen, we were identified as the ideal provider due to our excellent support and comprehensive managed service.

Our dedicated Charge support team conducted a free site survey and provided expert advice, ensuring that all their questions were promptly addressed. We assured them of our ability to increase supply capacity in the future and explained how optimising electricity tariffs could lead to substantial savings.

“

A fantastic service from start to finish, would highly recommend this company, they carried out every part of the project in a professional and timely manner.

”

Chargers installed

Ongoing support and maintenance

The Project

Our team managed the entire installation process with precision – installing two 22kW and six 7kW chargers in just nine days.

This project included refreshing existing bays, each marked clearly with an EV charging logo for easy identification.

Our support team also offered invaluable insights on local tariffs, optimising efficiency. Once operational, we continued to guide them on best charging practices and how to access EV charging data.

Fully Managed Service

By choosing Stark Charge, Co-op Academies can focus on their daily operations while we take care of everything from installation to maintenance.

Our proactive management of charge points not only provides cost-effective solutions but also differentiates us in the market.

By separating EV charging from overall building consumption, we help our partners clarify energy data, identify inefficiencies, and support their energy strategies.

Outcome

The seamless installation of chargers has given Co-op Academies Trust access to comprehensive analytics through Stark ID.

Additionally, by leveraging the £2,500 State-funded Education Grant for EV Chargers, they achieved significant savings totalling £20,000.

Our fully managed service included handling the grant application process, which simplified the experience.
